-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Objections

1. Claims 5-11 and 15-16 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim depends from another multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims 5-11 and 15-16 not been further treated on the merits.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-4 and 12-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Johnson US 4384557. The reference discloses an internal combustion engine comprising at least one engine head (9), to which at least one valve cover (7) and at least one fuel distribution line (15) are associated, the engine being characterized in that the engine head (9) comprises at least one first association means (60) and the valve cover (7) is provided with at least one through aperture, the fuel distribution line (15) being associated to the first association means of the engine head through the through aperture of the valve cover. Note the threaded cylindrical connector, with caps 30 and 30' threading the fuel line thereto. See Figures 1-3 showing the arrangement of the fuel line passing through the valve cover with a threaded cylindrical coupling.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See the cited documents showing fuel lines connected through a hole in the valve cover. Cylindrical, threaded pipe couplings are typical connectors in the art—e.g. See Bruning
